

Microsoft® Internet Explorer 7 (IE7) How to Configure and Use Tab Browsing

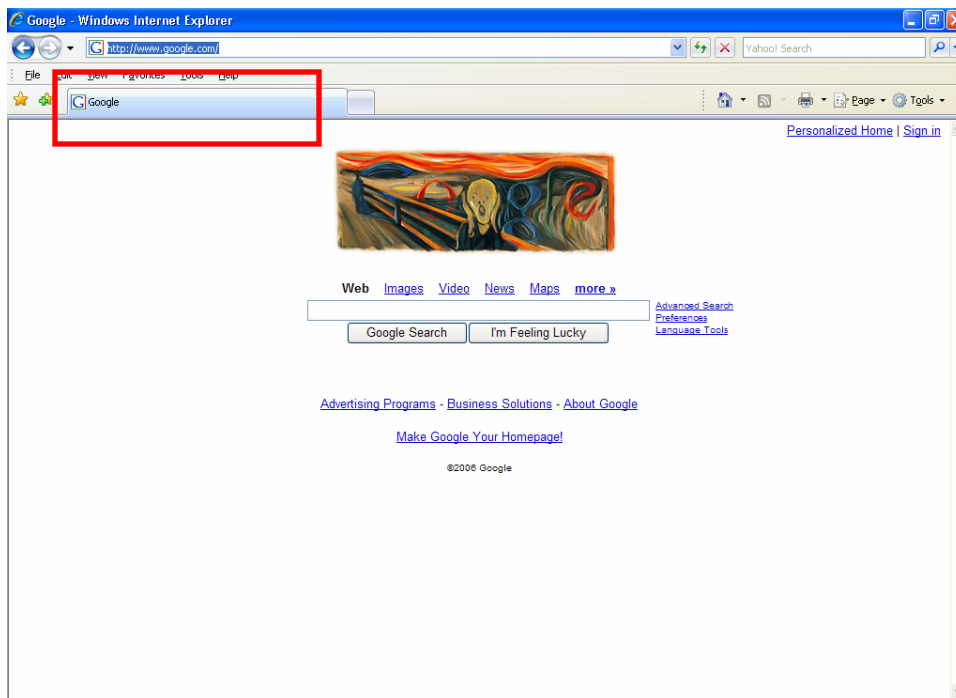

Use this document if:

- You want to configure and use the Tab Browsing feature.

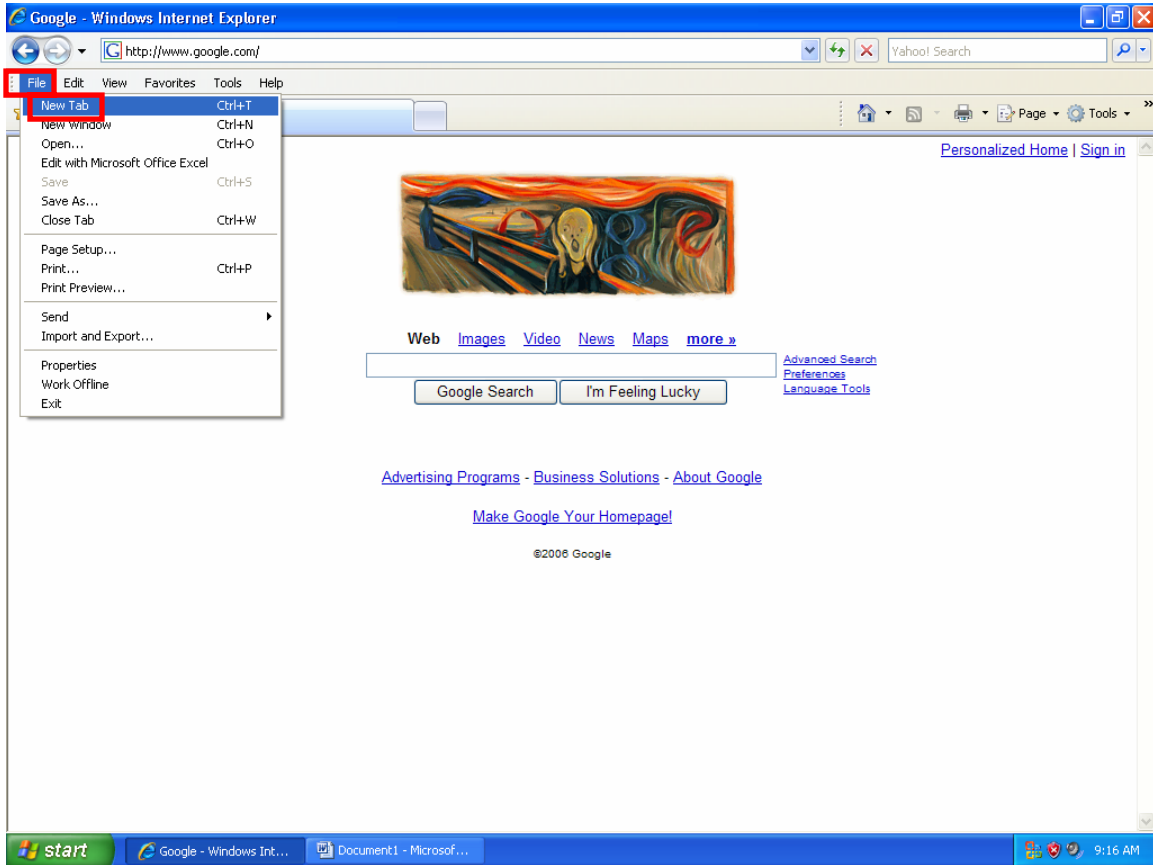

This document assumes:

- You have IE7 installed and are using it.
- You are connected to the Internet.

1. Open **Internet Explorer**.
2. In the address bar, type the Web site address (URL) that you want to appear as a tab (e.g. www.google.com).

3. Select **File**. Then, select **New Tab**.

4. The new tab will appear. You may now use the tab to reach the desired Web page.

As you add tabs, it will be necessary to type the desired URL in the address bar for each. After each Web page loads the first time, you may simply use the designated tab to reach each Web site (without typing in the URL).
