

Microsoft® Internet Explorer 6 (IE6)

How to Enable/Disable AutoComplete

The AutoComplete feature for Internet Explorer suggests possible matches for entries you type in the Address toolbar, a Web page form, or user name and password fields on a Web page.

Suggestions made by AutoComplete are displayed in a list as soon as Internet Explorer recognizes familiar patterns. If a suggestion in the list matches what you want, follow these steps:

1. Select the **suggestion** provided, or use the **down arrow** key to display a list of additional suggestions.
2. Then, select **Enter**.

To modify settings for AutoComplete or to clear all items from the list of suggestions, follow these steps:

1. Open **Internet Explorer**.
2. In the Tools menu at the top, select **Internet Options**.
3. Select the **Content** tab.
4. Select **AutoComplete**.
5. Select the appropriate **check boxes** to enable or disable AutoComplete functions. You can also select **Clear Forms** or **Clear Passwords** to clear all saved items from the AutoComplete history.
6. Select **OK**.
7. Then, select **OK** again.
